Introduction to

Radioactivity and Half-
Life Experiment kit

#450 The goal of this highly interesting kit is to simplify a complex task: The investigation of half-life. The general concepts of radioactivity and half-life are explored using the material in this Lab-Aid.

Guide Date Some substances contain radioactive elements and they have a property called half-life. Half-life is the time it takes for half of the atoms in the element to decay or change into another element. The atoms do not decay in any set order. Some radioactive

students gain a better understanding of radioactive dating and half-lives. Students are able to visualize and model what is meant by the half-life of a reaction. By extension, this experiment is a useful analogy to radioactive decay and carbon dating.

in Mammalian Cells

The half-life of an isotope can be explained as the average time that takes half of the total number of atoms in a sample to decay eventually. What this experiment aims to show is how probability is related to radioactive decay. We use coins in this experiment as a model that reflects the randomness of the radioactive decay
