Table 5.6.1. We begin with the squaring property of equality 23; given real numbers a and b , we have the following: $\text{If } a = b$, then $a^2 = b^2$ In other words, equality is retained if we square both sides of an equation.

Radical equations may have one or more radical terms, and are solved by eliminating each radical, one at a time. We have to be careful when solving radical equations, as it is not unusual to find extraneous solutions, roots that are not, in fact, solutions to the equation. These solutions are not due to a mistake in the solving method, but

To multiply or divide two radicals, the radicals must have the same index number. The product rule dictates that the multiplication of two radicals simply multiplies the values within and places the answer within the same type of radical, simplifying if possible. For example, $\sqrt[3]{2} \times \sqrt[3]{4} = \sqrt[3]{8}$, which
