A Cctv Camera And Lens

A security camera lens size determines the field of surveillance view and zoom level that the camera provides. The camera lenses that CCTV Camera Pros supplies generally range from 2.5mm to 100mm. The larger the size of the lens, the more narrow and zoomed in the field of view is. Some of our fixed lens cameras come standard with a 3.6mm or 6mm lens.

Security Camera Lens Size Comparison - CCTV Camera Pros

CCTV Lens Comparison Video Below is a list of different lens sizes that we used to make our security camera lens video. In addition to fixed lenses, we also used 2.8-12mm, 6-60mm, and 5-100mm vari-focal lenses to compare different viewing angles and zoom lengths. 1.78mm - 120°

Security Camera Lens | CCTV Camera Lenses | Megapixel

The simplest CCTV lens is a piece of glass (or plastic) to focus the light from the outside world onto the camera's imaging sensor. This lens' only adjustable mechanism is its focus-ring, part of the barrel body, which you turn until your image is as clear as possible. Incidentally, use the sharpest test monitor you can.

In a nutshell, CCTV security camera lenses contain either a fixed lens (also called monofocal lens) or varifocal lens. A fixed lens camera's focal length (2.8mm, 4mm, etc) is fixed or permanently set, meaning that the field of view's focal length cannot be changed or adjusted without using a different camera.

CCTV Security Camera Lens Guide - CLEAR IT SECURITY

Download File PDF A Cctv Camera And Lens

A fixed or board CCTV camera lens has a set viewing angle. This means the camera lens cannot be zoomed in or adjusted in any way. Fixed lens cameras are generally less expensive so can be a good option if the layout of an area is not likely to change (such as a room in a house).

Understanding CCTV camera lenses - Trinity CCTV - 0508 11 ...

When mounting a lens to a CCTV security camera, you'll have C or CS mount to choose from. Both the lens and the camera will specify which they are. Many cameras say "C/CS mount", which means it will allow for either. The difference between the two is the distance between the image sensor and the lens....
