Analytical chemistry studies and uses instruments and methods used to separate, identify, and quantify matter. In practice, separation, identification or quantification may constitute the entire analysis or be combined with another method. Separation isolates analytes. Qualitative analysis

Chemical analysis has some basic steps like, choice of method, sampling, preliminary sample treatment, separations, final measurement and assessment of results. It is with the first step viz. choice of method, care should be exercised to select the proper instrument to carry out fruitful analysis.

INSTRUMENTAL CHEMICAL ANALYSIS: BASIC PRINCIPLES AND ...

The four basic analytical techniques commonly used for elemental analysis are atomic absorption (AA), inductively coupled plasma-mass spectrometry ICP-MS (ICP-MS), ICP-optical emission spectroscopy (), and X-ray fluorescence (XRF).

The module gives an introductory overview of the main techniques used in analytical chemistry. It provides understanding of the fundamental principles of chemical analysis as well as the main aspects of their application. The combination of lectures and practical sessions allows the students to get familiarised with the common practises in an analytical
