### Difficulty breathing: Causes, symptoms, and treatment

If your pH is high (alkaline), your body is fooled into thinking that it needs less blood there. Your nervous system adjusts by decreasing blood flow there! So, breathing 100% oxygen leads to similar circulatory imbalances as in a panic attack. It fools your autonomic nervous system (ANS) into thinking that it has plenty of oxygen and alkalinity.

The wall of your chest is flexible. This helps you breathe normally. Stiff tissue called cartilage attaches your ribs to the breast bone (sternum). The intercostal muscles are the muscles between the ribs. During breathing, these muscles normally tighten and pull the rib cage up. Your chest expands and the lungs fill with air.
