The dynamic response of CFS framing members or panels to blast pressure is a function of the force generated from the blast, the mass of the member or panel resisting the blast, and the system stiffness or resistance. It can be reasonably assumed that the dynamic response of CFS panels is dominated by flexural modes.

Dynamic mechanical analysis (abbreviated DMA) is a technique used to study and characterize materials.It is most useful for studying the viscoelastic behavior of polymers.A sinusoidal stress is applied and the strain in the material is measured, allowing one to determine the complex modulus.The temperature of the sample or the frequency of the stress are often varied, leading to variations in ...

Vibration is a mechanical phenomenon whereby oscillations occur about an equilibrium point.The word comes from Latin vibrationem ("shaking, brandishing"). The oscillations may be periodic, such as the motion of a pendulum—or random, such as the movement of a tire on a gravel road.. Vibration can be desirable: for example, the motion of a tuning fork, the reed in a woodwind instrument or ...
