Enderton also introduces different options of the setup. For example, in real number construction, he explains there are 3 ways, by decimal extension, by Cauch series, or, as he adopted, by Dedekind's cut. For those would like to try a bit more deep topics, the last two chapters are a good start.

§2.5. Construction of the Real Numbers By use of the cancellation law (Corollary 4P), we obtain  $m + s = r + n$ , and thus  $\langle m, n \rangle \sim \langle r, s \rangle$ .-l Definition The set  $7L$  of integers is the set  $\{w \times w\}$  of all equivalence classes of differences. For example, the integer  $2z$  is the equivalence class

Enderton then at last introduces a deductive proof system pages into the mathematjcal. The chapter ends with a little model theory — compactness, the LS theorems, interpretations between theorems — all rather briskly done, and there is an application to the construction of infinitesimals in non-standard analysis which is surely going to be ...
