Syntax pattern – A string that specifies the pattern of the regular expression or another regular expression. attributes – An optional string containing any of the "g", "i", and "m" attributes that specify global,...

Regular Expressions and RegExp Object - Tutorialspoint

Read Free Javascript Regular Expressions

The constructor of the regular expression object—for example, `new RegExp('ab+c')`—results in runtime compilation of the regular expression. Use the constructor function when you know the regular expression pattern will be changing, or you don't know the pattern and obtain it from another source, such as user input.
