Resonant Voice Therapy . Resonant voice is defined as voice production involving oral vibratory sensations, usually on the anterior alveolar ridge or lips or higher in the face in the context of easy phonation. Resonant voice therapy uses a continuum of oral sensations and easy phonation, building from basic speech gestures through conversational speech. The goal is to achieve the strongest, "cleanest" possible voice with the least effort and

...

Voice therapy is an approach used by speech-language pathologists to help patients find relief from symptoms and achieve the best possible voice. Voice therapy consists of an assessment, followed by the implementation of two techniques: voice therapy and vocal hygiene. Assessment. The first step of voice therapy is to assess the patient's voice production and voice quality and structure the therapeutic program accordingly.
