Heat and mass transfer through thermal protective clothing. Protection from adverse external conditions (high heat flux) is the primary consideration while designing or manufacturing the thermal protective clothing. Recently, thermo-physiological comfort of the firefighters or industrial workers also attracted attention of many researchers.

Mass transport deals with the transport of various chemical species themselves. Three different types of physical quantities are used in transport phenomena: scalars (e.g. temperature, pressure and concentration), vectors (e.g. velocity, momentum and force) and second order tensors (e.g. stress or momentum flux and velocity gradient).
