Spinraza treatment should be initiated as early as possible after diagnosis with 4 loading doses on Days 0, 14, 28 and 63. A maintenance dose should be administered once every 4 months thereafter.

ANNEX I SUMMARY OF PRODUCT CHARACTERISTICS

Nusinersen, marketed as Spinraza, is a medication used in treating spinal muscular atrophy (SMA), a rare neuromuscular disorder. In December 2016, it became the first approved drug used in treating this disorder. Nusinersen cost US\$750,000 in the first year and US\$375,000 annually after that in the United States as of 2019.

Nusinersen - Wikipedia

Nusinersen is a survival motor neuron-2 (SMN2)-directed antisense oligonucleotide (ASO) designed to treat spinal muscular atrophy (SMA) caused by mutations in chromosome 5q that lead to SMN protein deficiency. Nusinersen increases exon 7 inclusion in SMN2 messenger ribonucleic acid (mRNA) transcripts and production of full-length SMN protein.

Spinraza (nusinersen) dose, indications, adverse effects ...

Spinraza is part of the Antisense Therapeutics class and treats musculoskeletal conditions. Antisense therapeutics are used to treat certain types of genetic disorders or infections. Antisense therapeutics can work by making a nucleic acid that is able to “turn off” the particular gene that is causing the disease.
